WHAT I BUILT

A real store, built and run like a product.

Each part exists because the business needs it.

BUILT	WHY IT MATTERS
Storefront and checkout	Customers pay safely with Stripe
Admin for owners	Orders, stock and offers without a developer
Email platform	Campaigns built from live catalog data
Back-in-stock alerts	Sold-out pages still capture demand
Docs site	New teammates get productive fast

PROOF

Measured on every run, not claimed.

Read from the latest test run, never typed in by hand.

MEASURE	TODAY	KEPT HONEST BY
Automated tests	1,894	Every pull request
Line coverage %	42.43	A baseline CI will not lower
Branch coverage %	32.07	The same ratchet
Deep imports	0	Architecture audit in CI
Merge gates	All required	CI checks plus a preview build

ENGINEERING JUDGEMENT

One rule: dependencies flow one way.

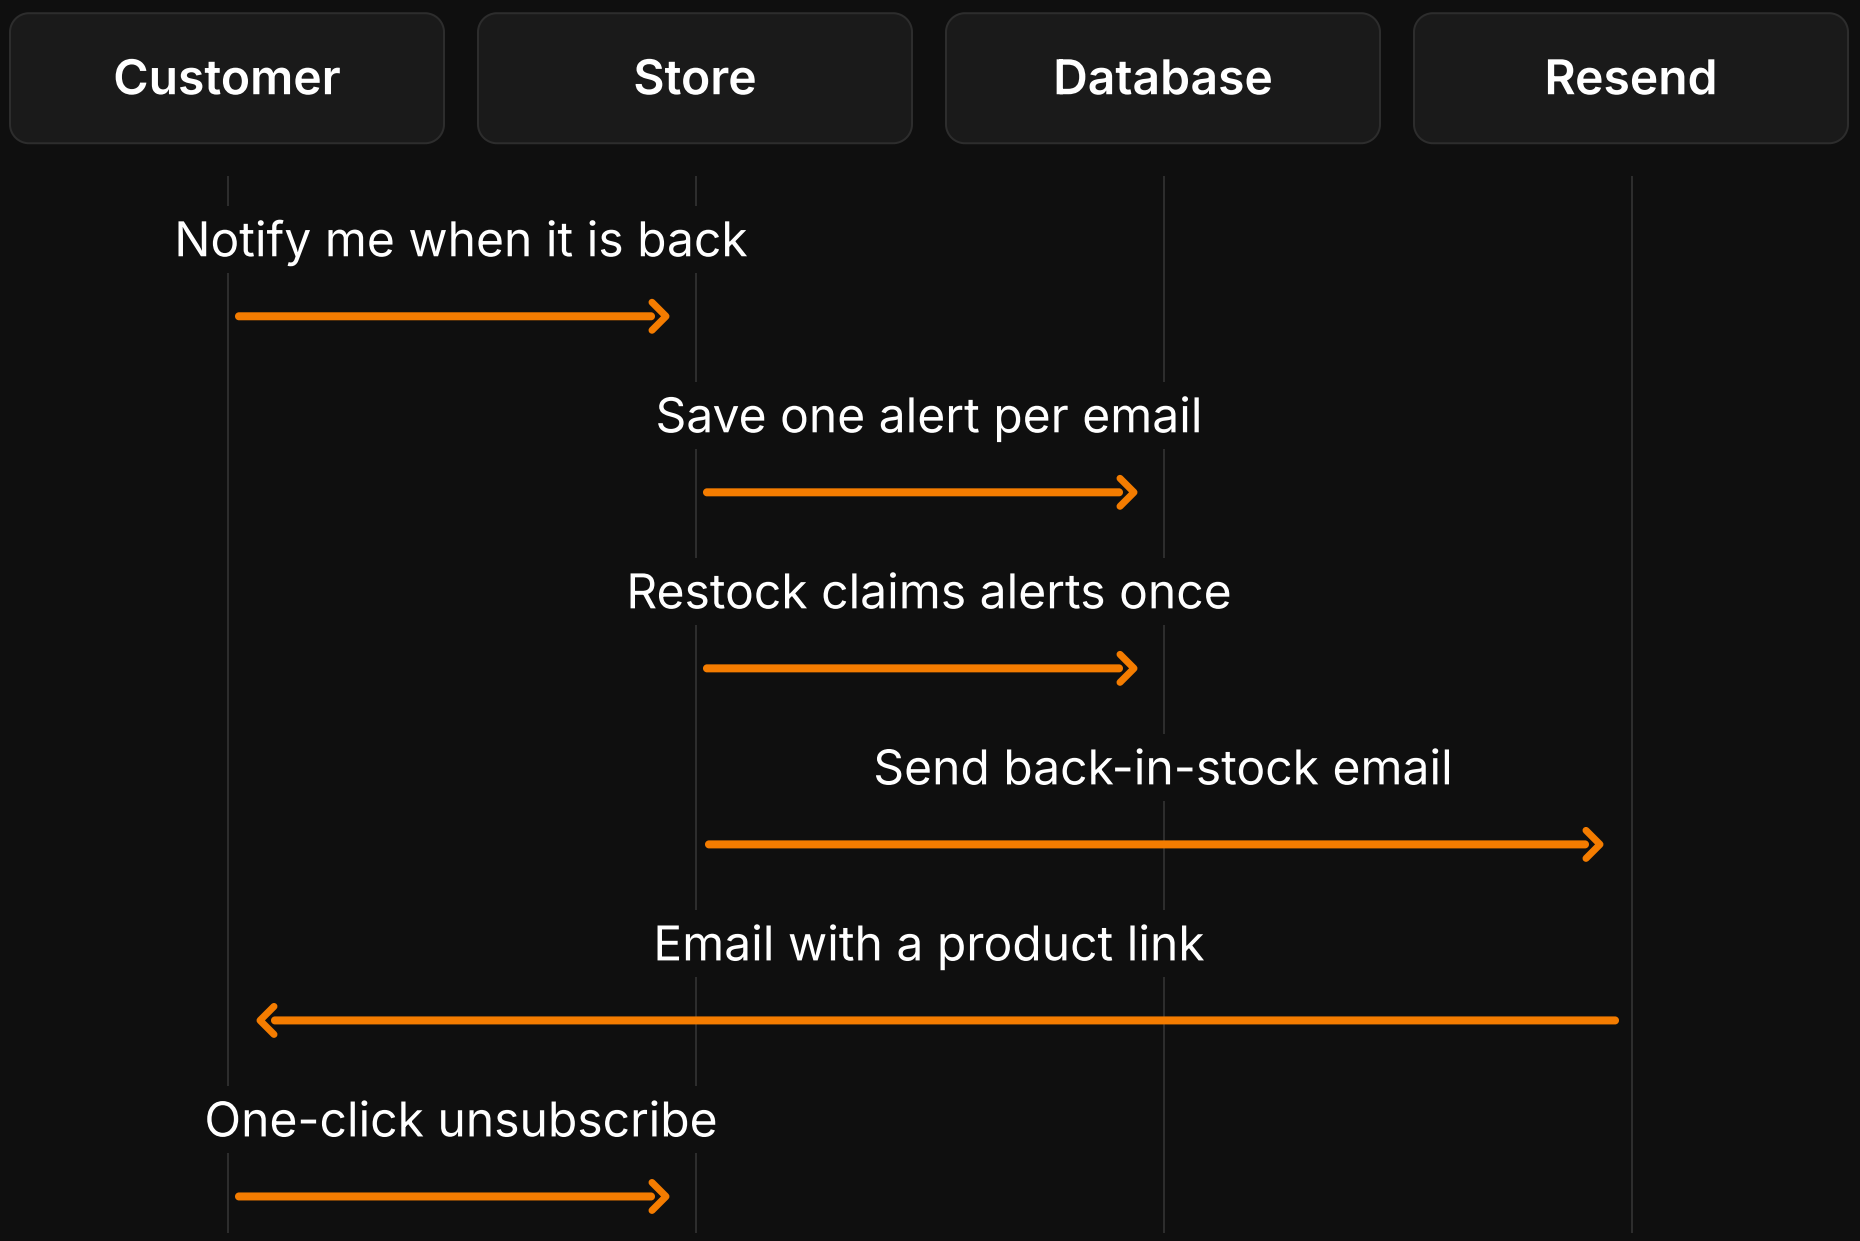

Never the reverse. CI fails any import that breaks the rule.

app	Routes and layouts only
↓	
`features`	One slice per domain, one public entry each
↓	
`features/*/lib`	actions, data, domain, adapters
↓	
`lib`	Shared code. Never imports a feature

BACK IN STOCK

From sold out to back in their inbox.

One alert per email, claimed once when stock returns.

THE STACK

A modern stack, chosen for the long run.

Typed end to end, server first, every piece swappable.

FRAMEWORK

Next.js 16 · React 19 · TypeScript · Tailwind CSS 4

DATA AND AUTH

Prisma 6 · Neon · Better Auth · Zod 4

PAYMENTS AND EMAIL

Stripe · Resend

QUALITY

Vitest · Playwright

LET'S TALK

Hiring for a build like this?

The case study walks through the architecture, the tests and the trade-offs behind every decision.
