ARCHITECTURE

Four blocks, one direction.

Each block calls only the one below it. CI fails the build otherwise.

Routes — Pages, layouts and route handlers in app/

↓

Feature slices — One folder per domain, one public entry

↓

Shared lib — Database, auth and helpers. Never a feature

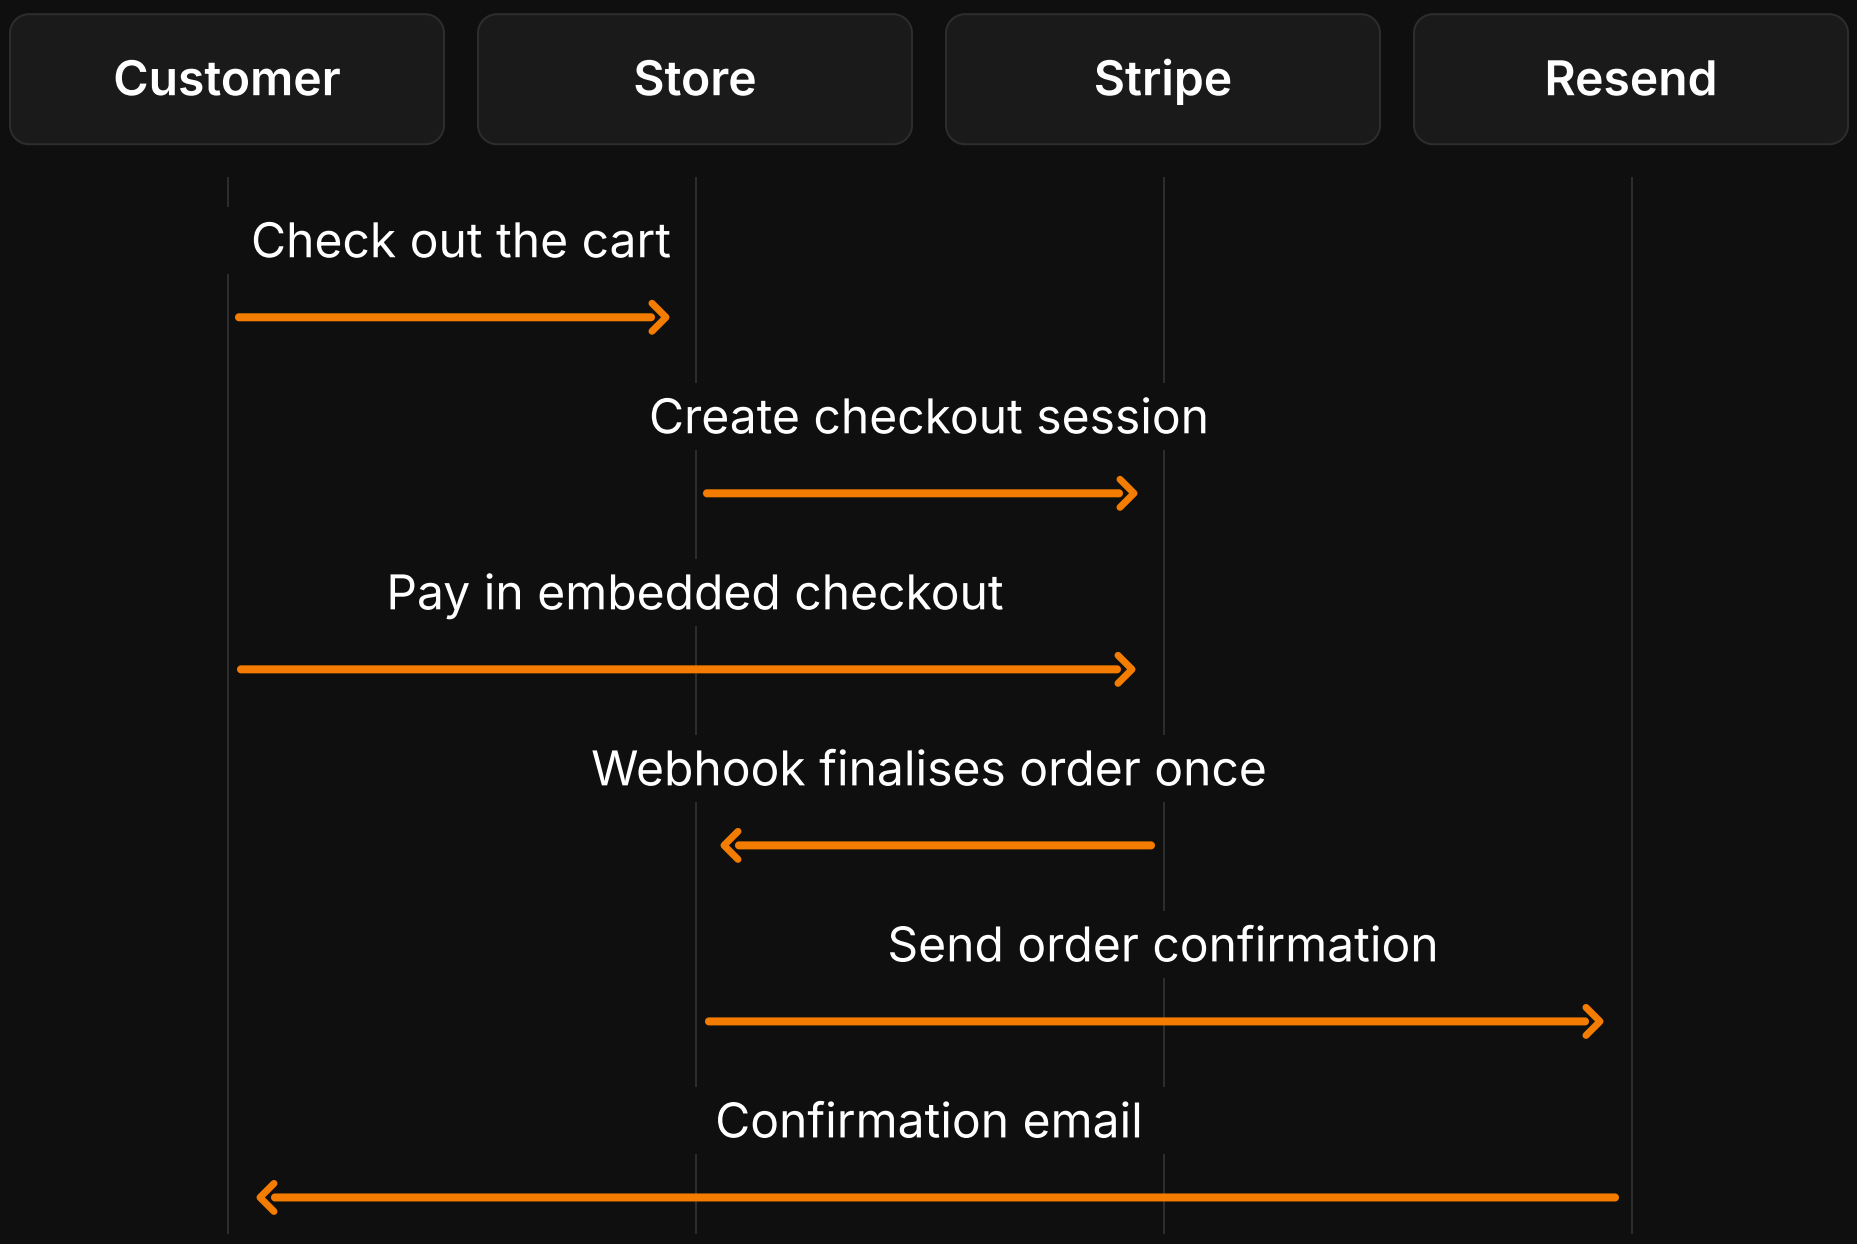

↓

Services — Neon, Stripe and Resend behind adapters

CHECKOUT

From cart to confirmation email.

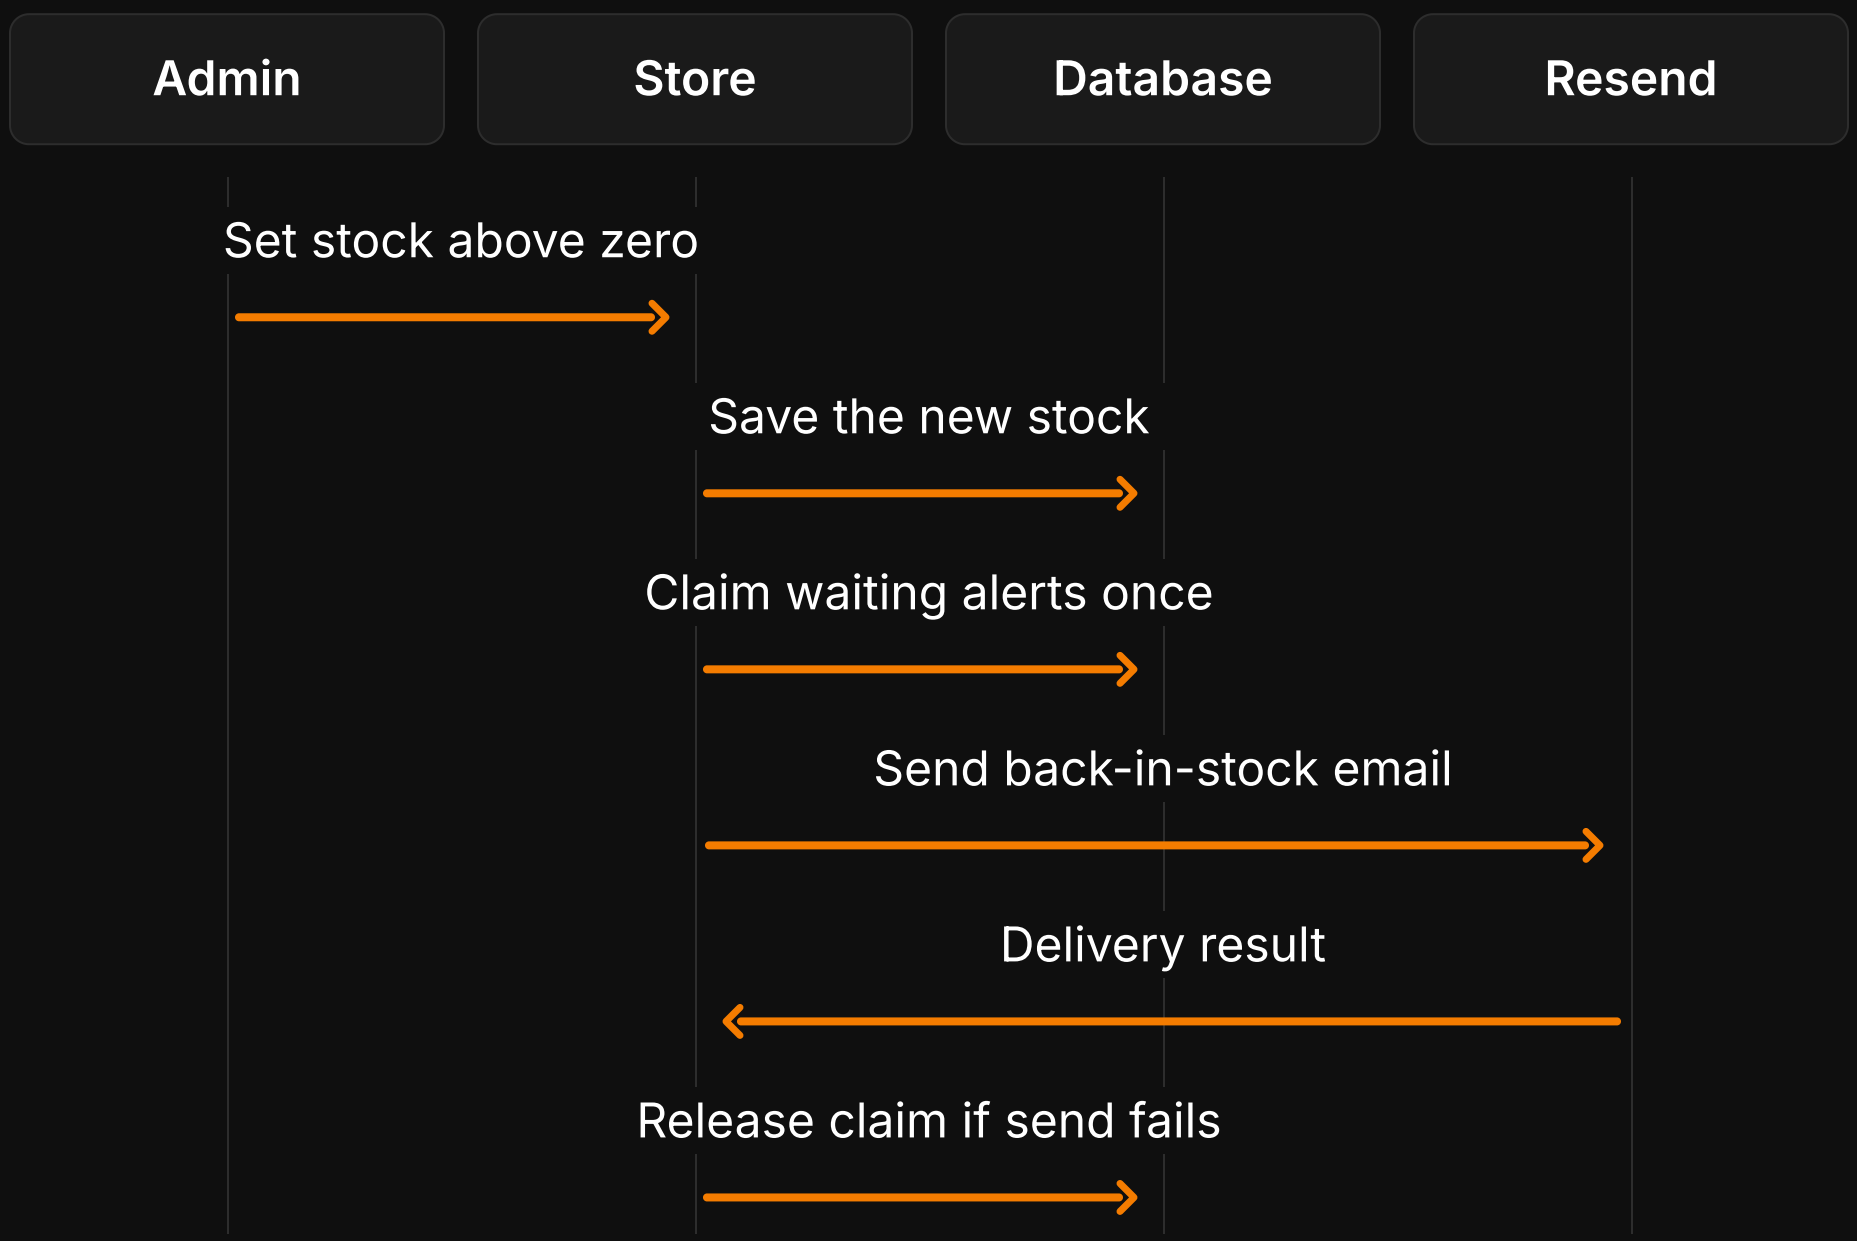

The webhook, not the browser, decides an order is paid.

BACK IN STOCK

Restock to alert, claimed once.

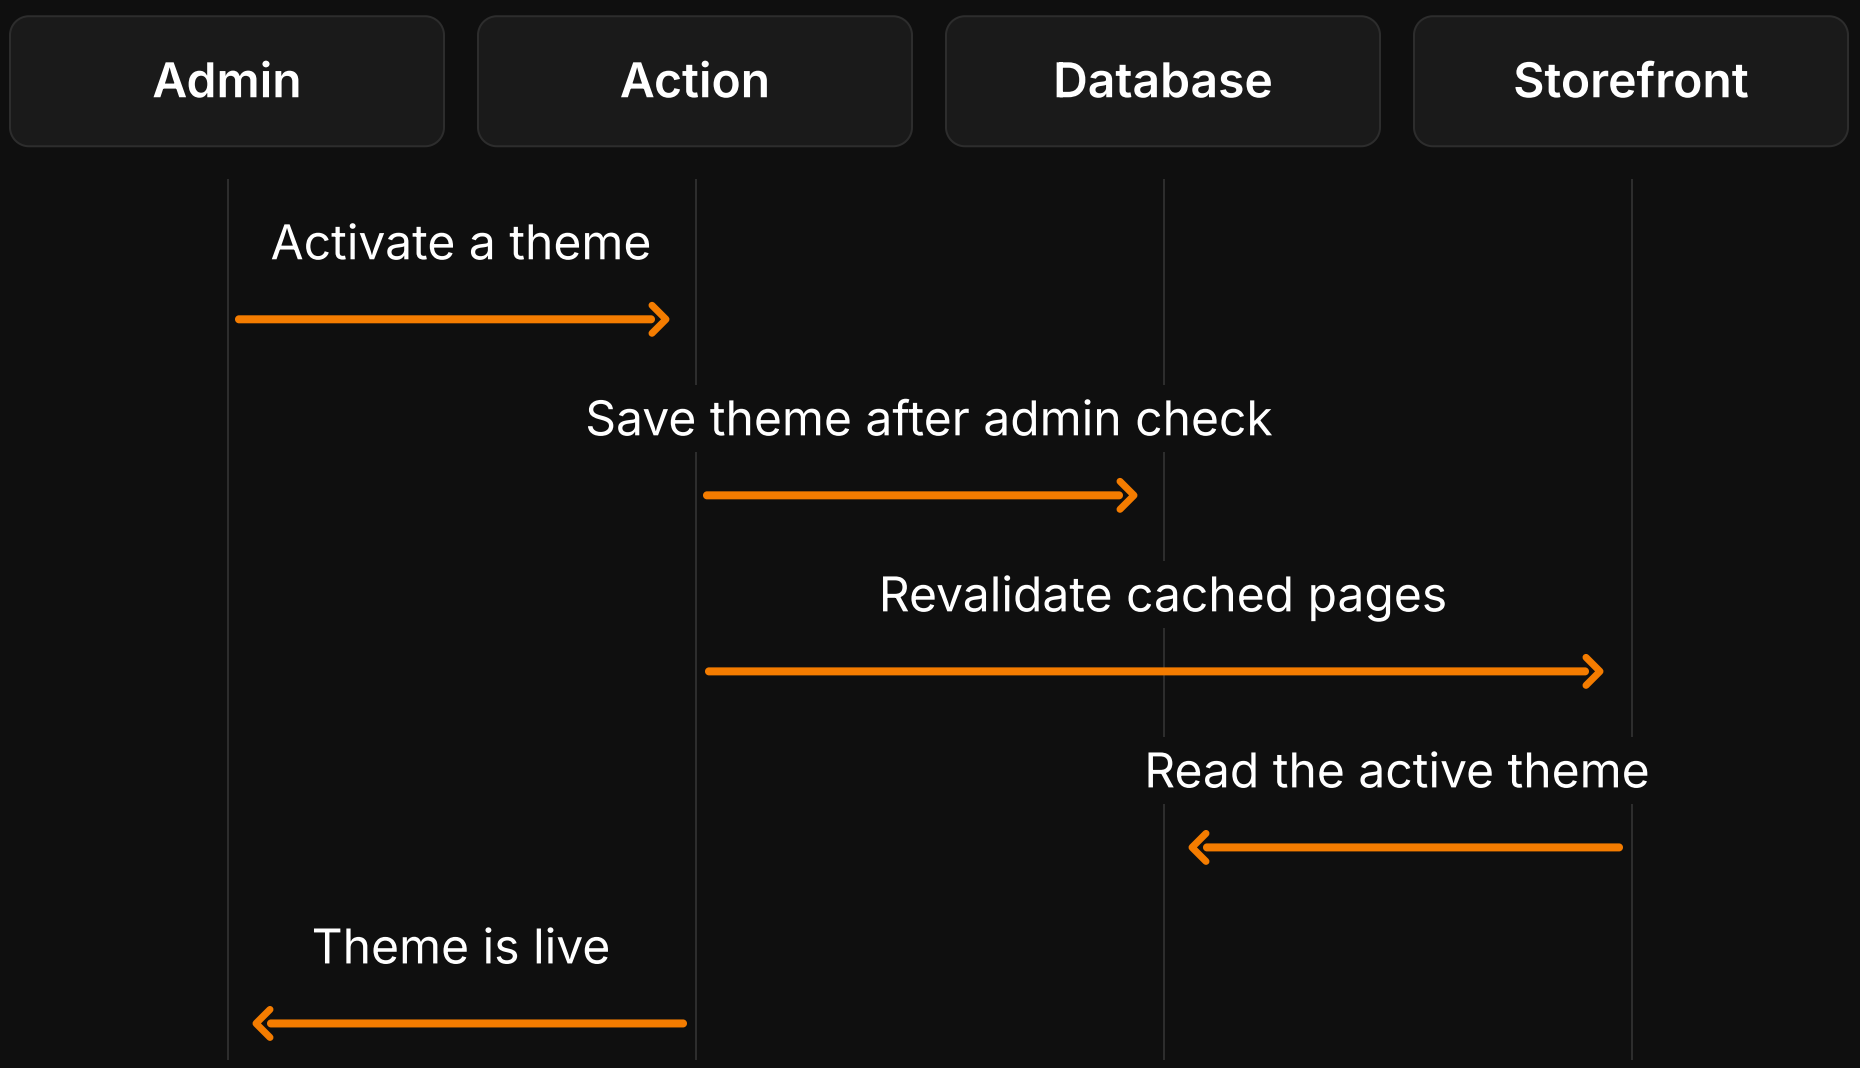

A claim stops double sends. A failed send hands it back.

THEME

One click, a new storefront theme.

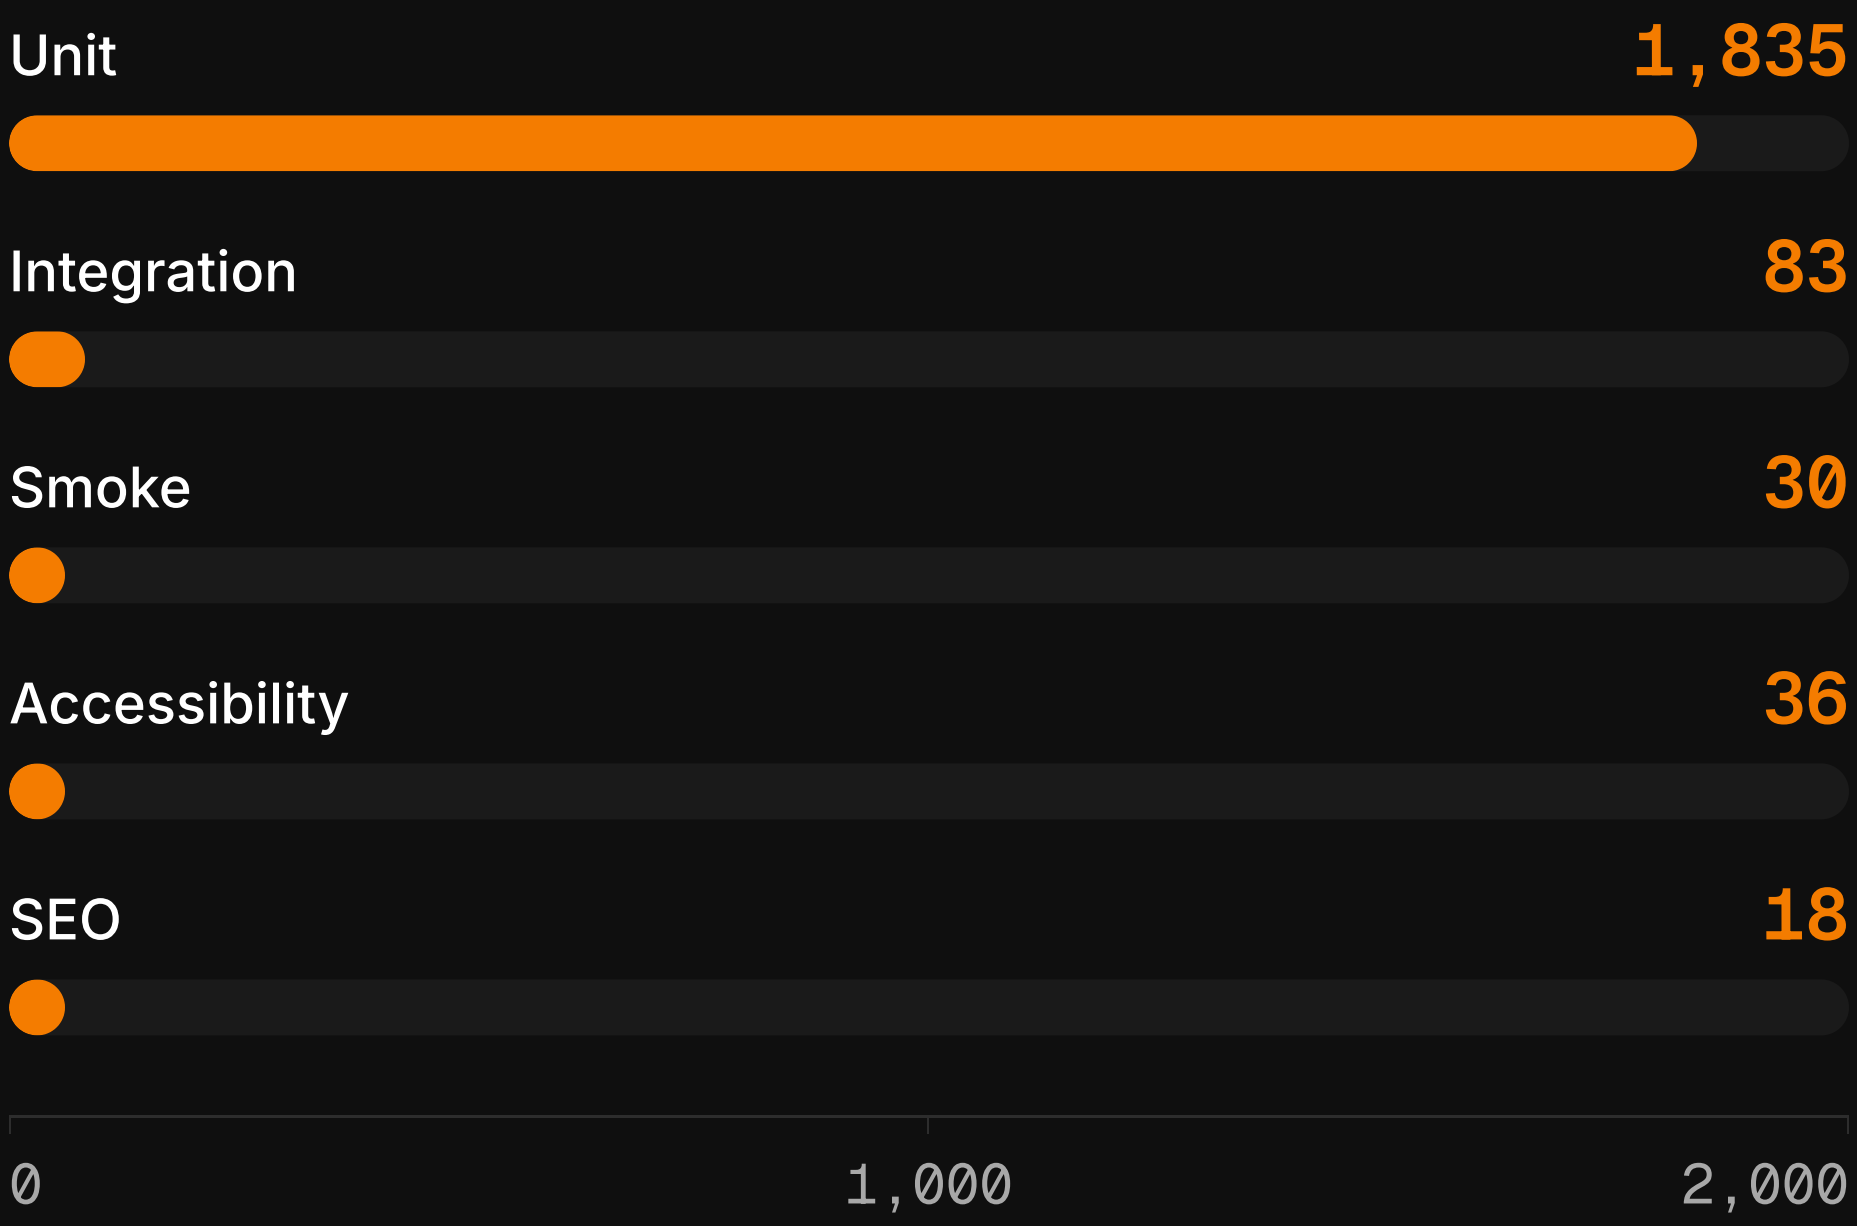

Only the server action writes, and it checks the admin first.

TEST PYRAMID

Many fast tests, a few slow ones.

Counted on every run, widest layer first.

COVERAGE RATCHET

Coverage can only go up.

CI fails if coverage drops below the committed baseline.

Lines covered
Baseline, then today

~~35.7~~ → **43.2**

Branches covered
Baseline, then today

~~27.4~~ → **33.2**

LET'S TALK

Hiring for a build like this?

The case study walks through the architecture, the tests and the trade-offs behind every decision.
