CHECKOUT, STEP BY STEP

What happens when you press Pay.

Five steps between a click and a receipt. Swipe through each one.

1. Customer pays
2. Total re-checked
3. Stripe charges once
4. Order saved
5. Email sent

STEP 1 OF 5

The customer presses Pay.

The browser sends only which products and how many. It never tells the server what anything costs.

1. **Customer pays**
2. Total re-checked
3. Stripe charges once
4. Order saved
5. Email sent

STEP 2 OF 5

The server works out the total itself.

The total is recomputed on the server from catalogue prices, so an edited cart cannot pay less.

1. Customer pays
2. **Total re-checked**
3. Stripe charges once
4. Order saved
5. Email sent

STEP 3 OF 5

Stripe charges exactly once.

Each payment carries an idempotency key, so a retry or a double click cannot charge the card twice.

1. Customer pays
2. Total re-checked
3. **Stripe charges once**
4. Order saved
5. Email sent

STEP 4 OF 5

The order is saved only when Stripe confirms.

The webhook signature is verified before the order is marked paid. A forged request is turned away.

1. Customer pays
2. Total re-checked
3. Stripe charges once
4. **Order saved**
5. Email sent

STEP 5 OF 5

The confirmation email arrives.

Resend sends the order email from the saved order, so the receipt matches exactly what was paid.

1. Customer pays
2. Total re-checked
3. Stripe charges once
4. Order saved
5. **Email sent**

LET'S TALK

Hiring for a build like this?

The case study walks through the architecture, the tests and the trade-offs behind every decision.
