HOW IT WAS BUILT

Thirty-plus sprints, one loop.

Plan, test first, one pull request, merge only on green, never let quality slip.

1. Plan
2. Test first
3. One PR
4. Green only
5. Ratchet

STEP 1 OF 5

Every sprint starts from a written plan.

Outcome, acceptance criteria and the tests to write are agreed before any code changes.

1. **Plan**
2. Test first
3. One PR
4. Green only
5. Ratchet

STEP 2 OF 5

The failing test comes first.

Each feature starts as a test that fails for the right reason, then just enough code to make it pass.

1. Plan
2. **Test first**
3. One PR
4. Green only
5. Ratchet

STEP 3 OF 5

One sprint, one branch, one pull request.

Small, reviewable changes, squash-merged so the history reads one sprint per commit.

1. Plan
2. Test first
3. **One PR**
4. Green only
5. Ratchet

STEP 4 OF 5

Merges happen only on green.

The app build, CI and the Vercel preview all have to pass. A failure is fixed in the same sprint.

1. Plan
2. Test first
3. One PR
4. **Green only**
5. Ratchet

STEP 5 OF 5

Quality can only go up.

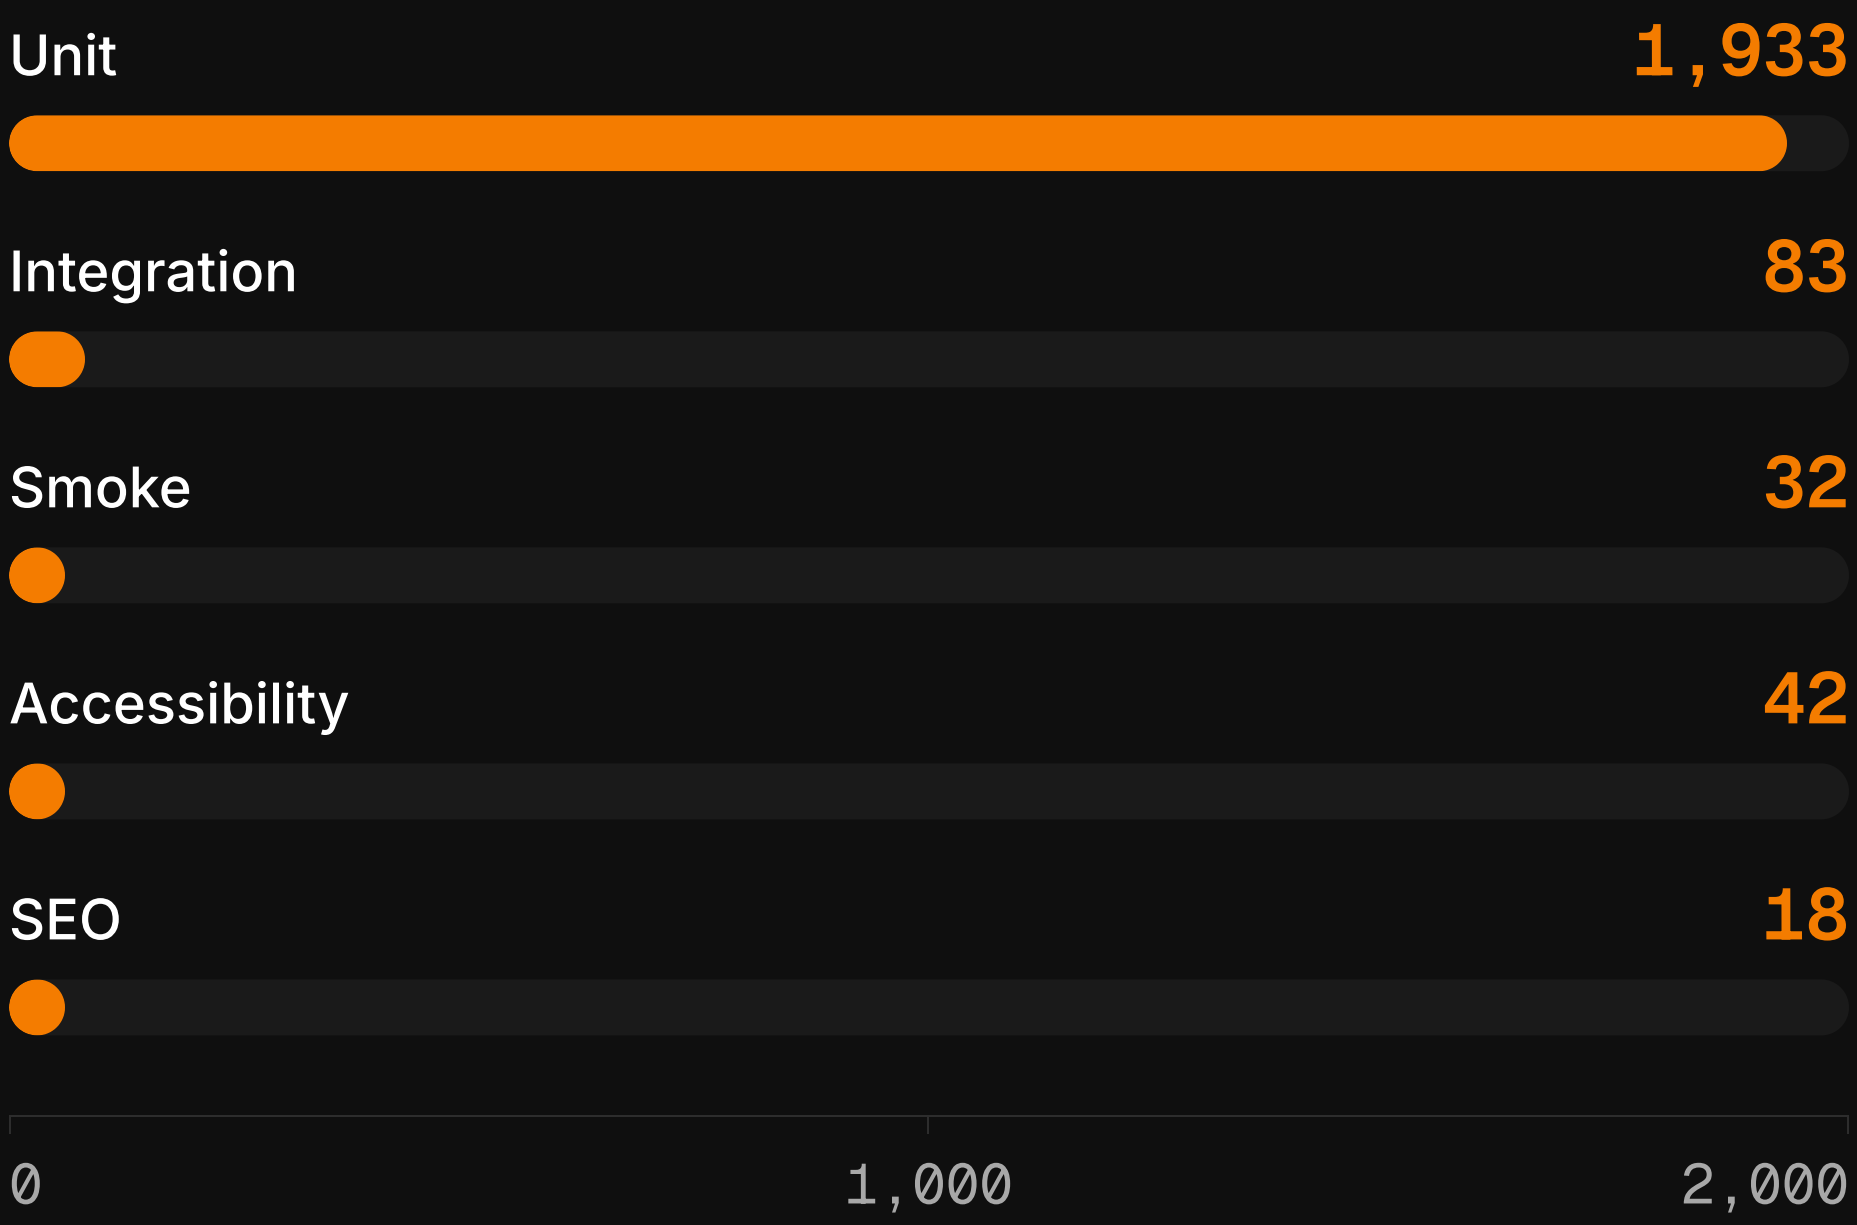

Architecture numbers are measured against a committed baseline, so a regression fails the build.

1. Plan
2. Test first
3. One PR
4. Green only
5. **Ratchet**

TEST PYRAMID

Many fast tests, a few slow ones.

Counted on every run, widest layer first.

LET'S TALK

Hiring for a build like this?

The case study walks through the architecture, the tests and the trade-offs behind every decision.
