CASE STUDY

Email built into the store, not bolted on.

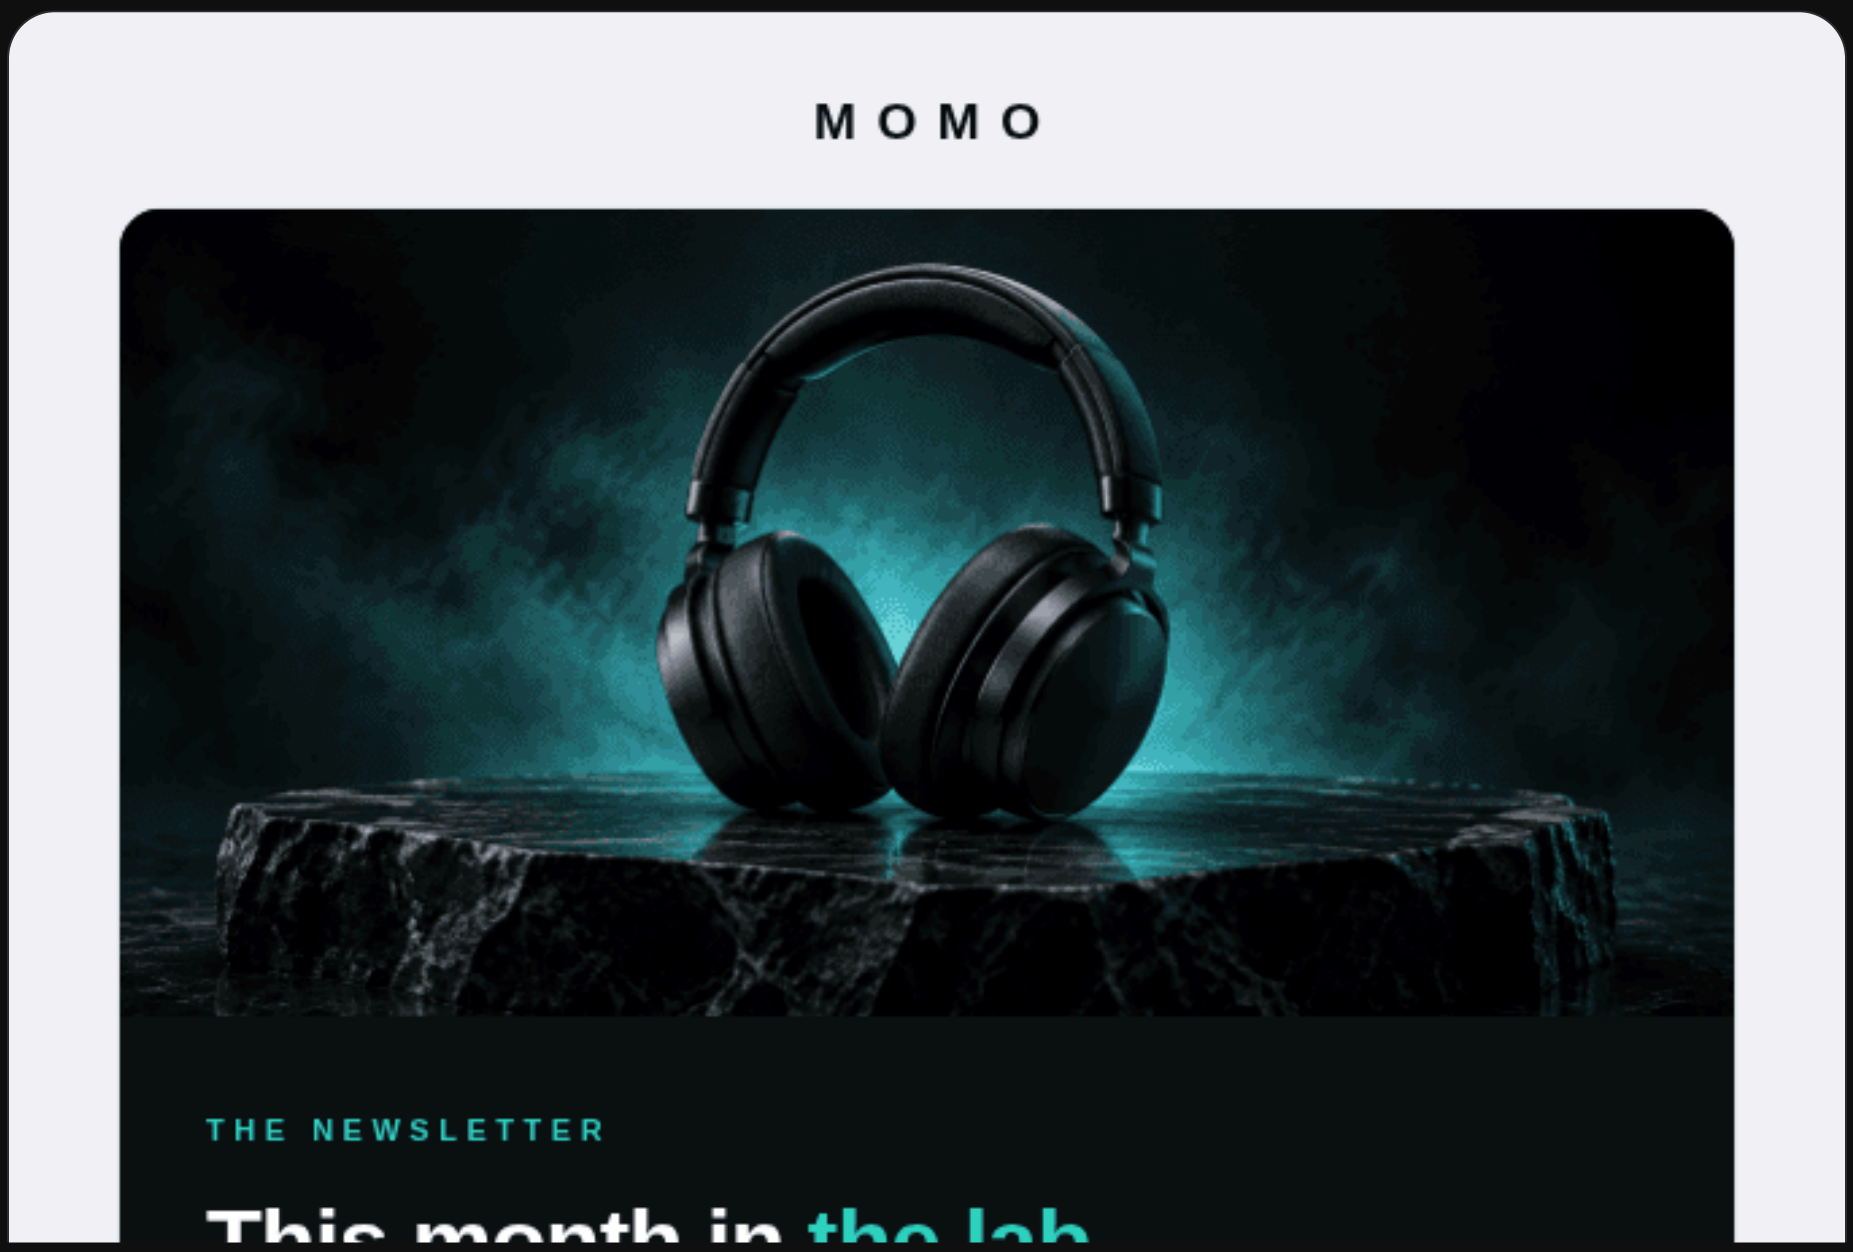

A block-based email platform inside a Next.js commerce site, shipped in small, test-first pull requests.

REAL CATALOG DATA

Live products and prices in every email.

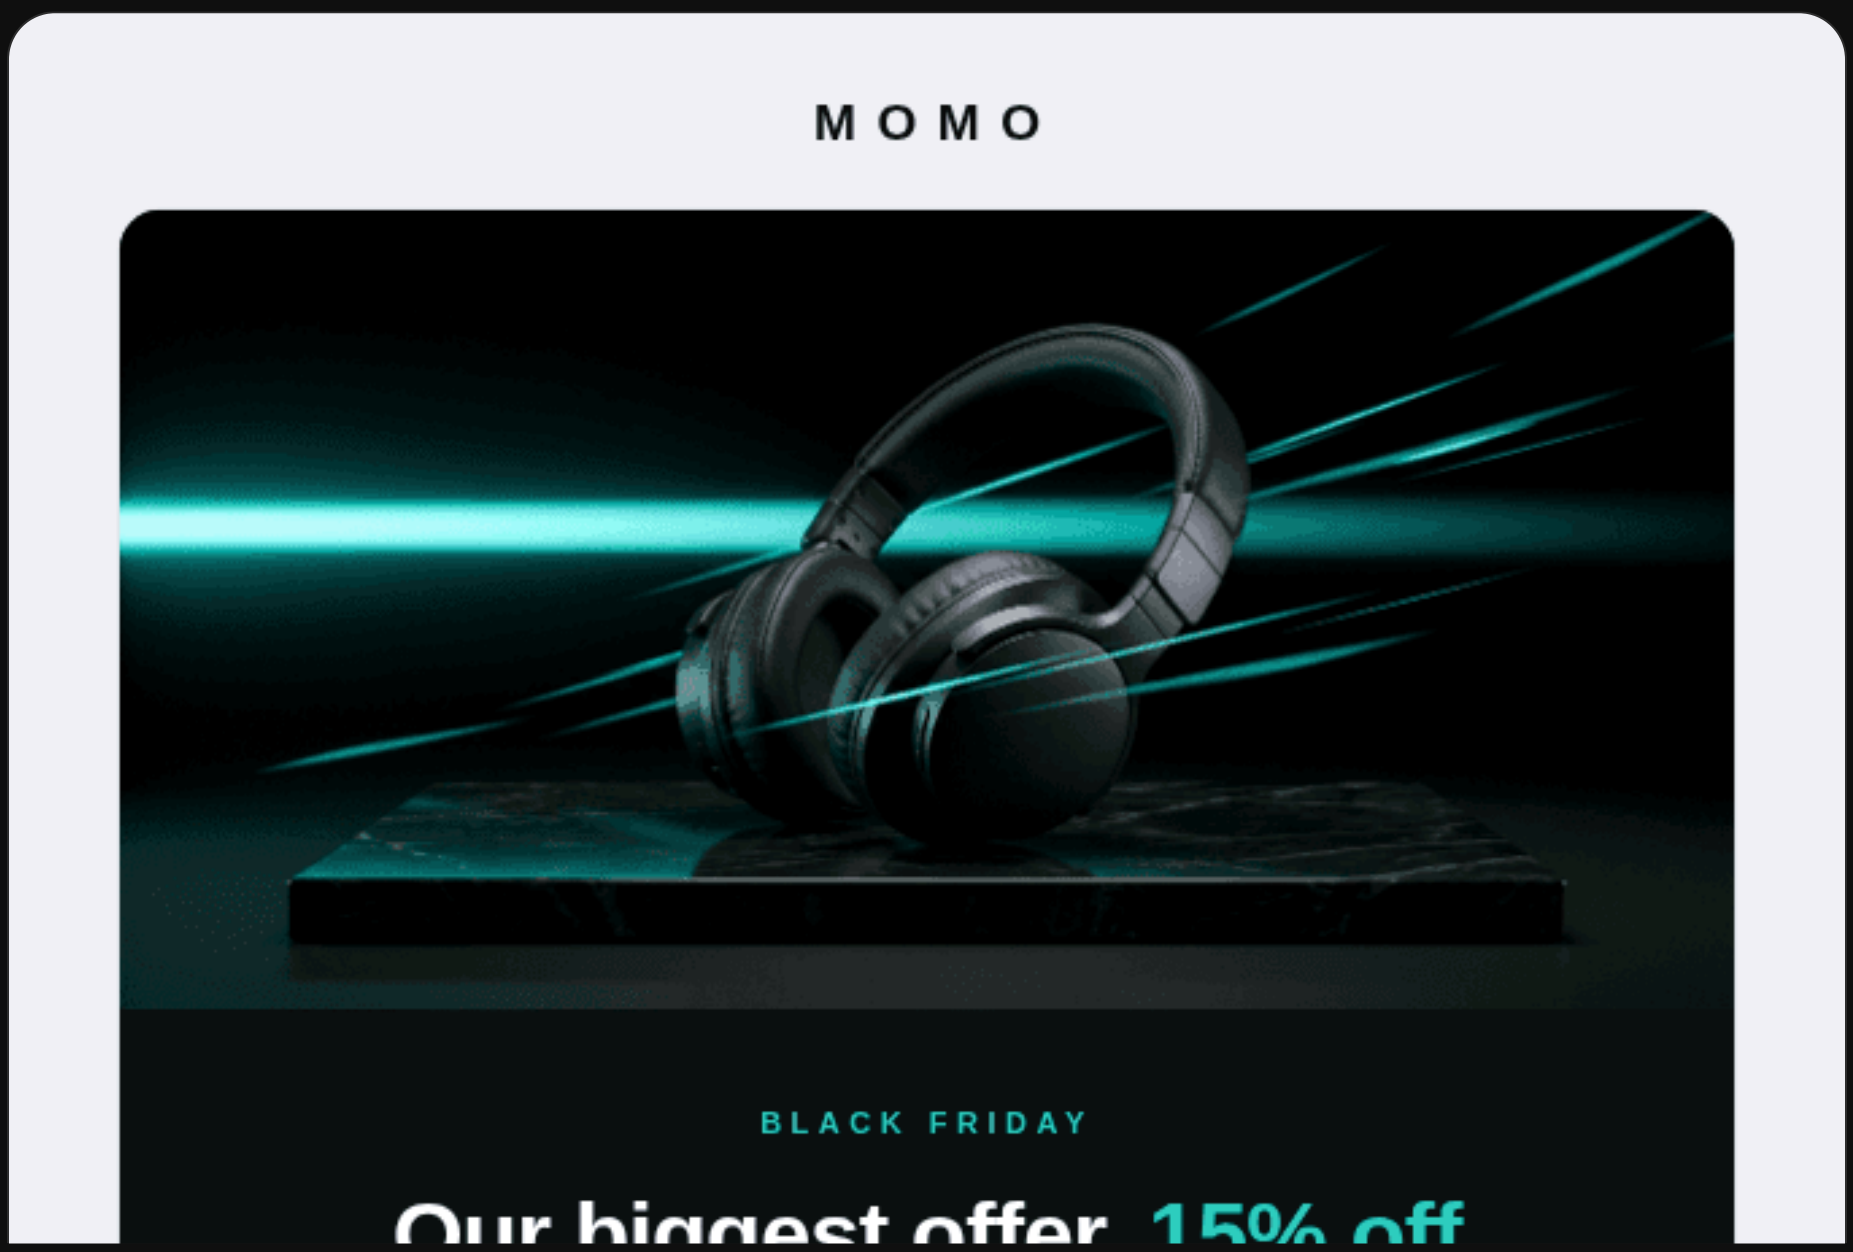

Product picks read straight from the store catalog, so nothing is copied by hand and nothing goes stale.

SEASONAL STARTERS

Black Friday starts from a design, not a blank page.

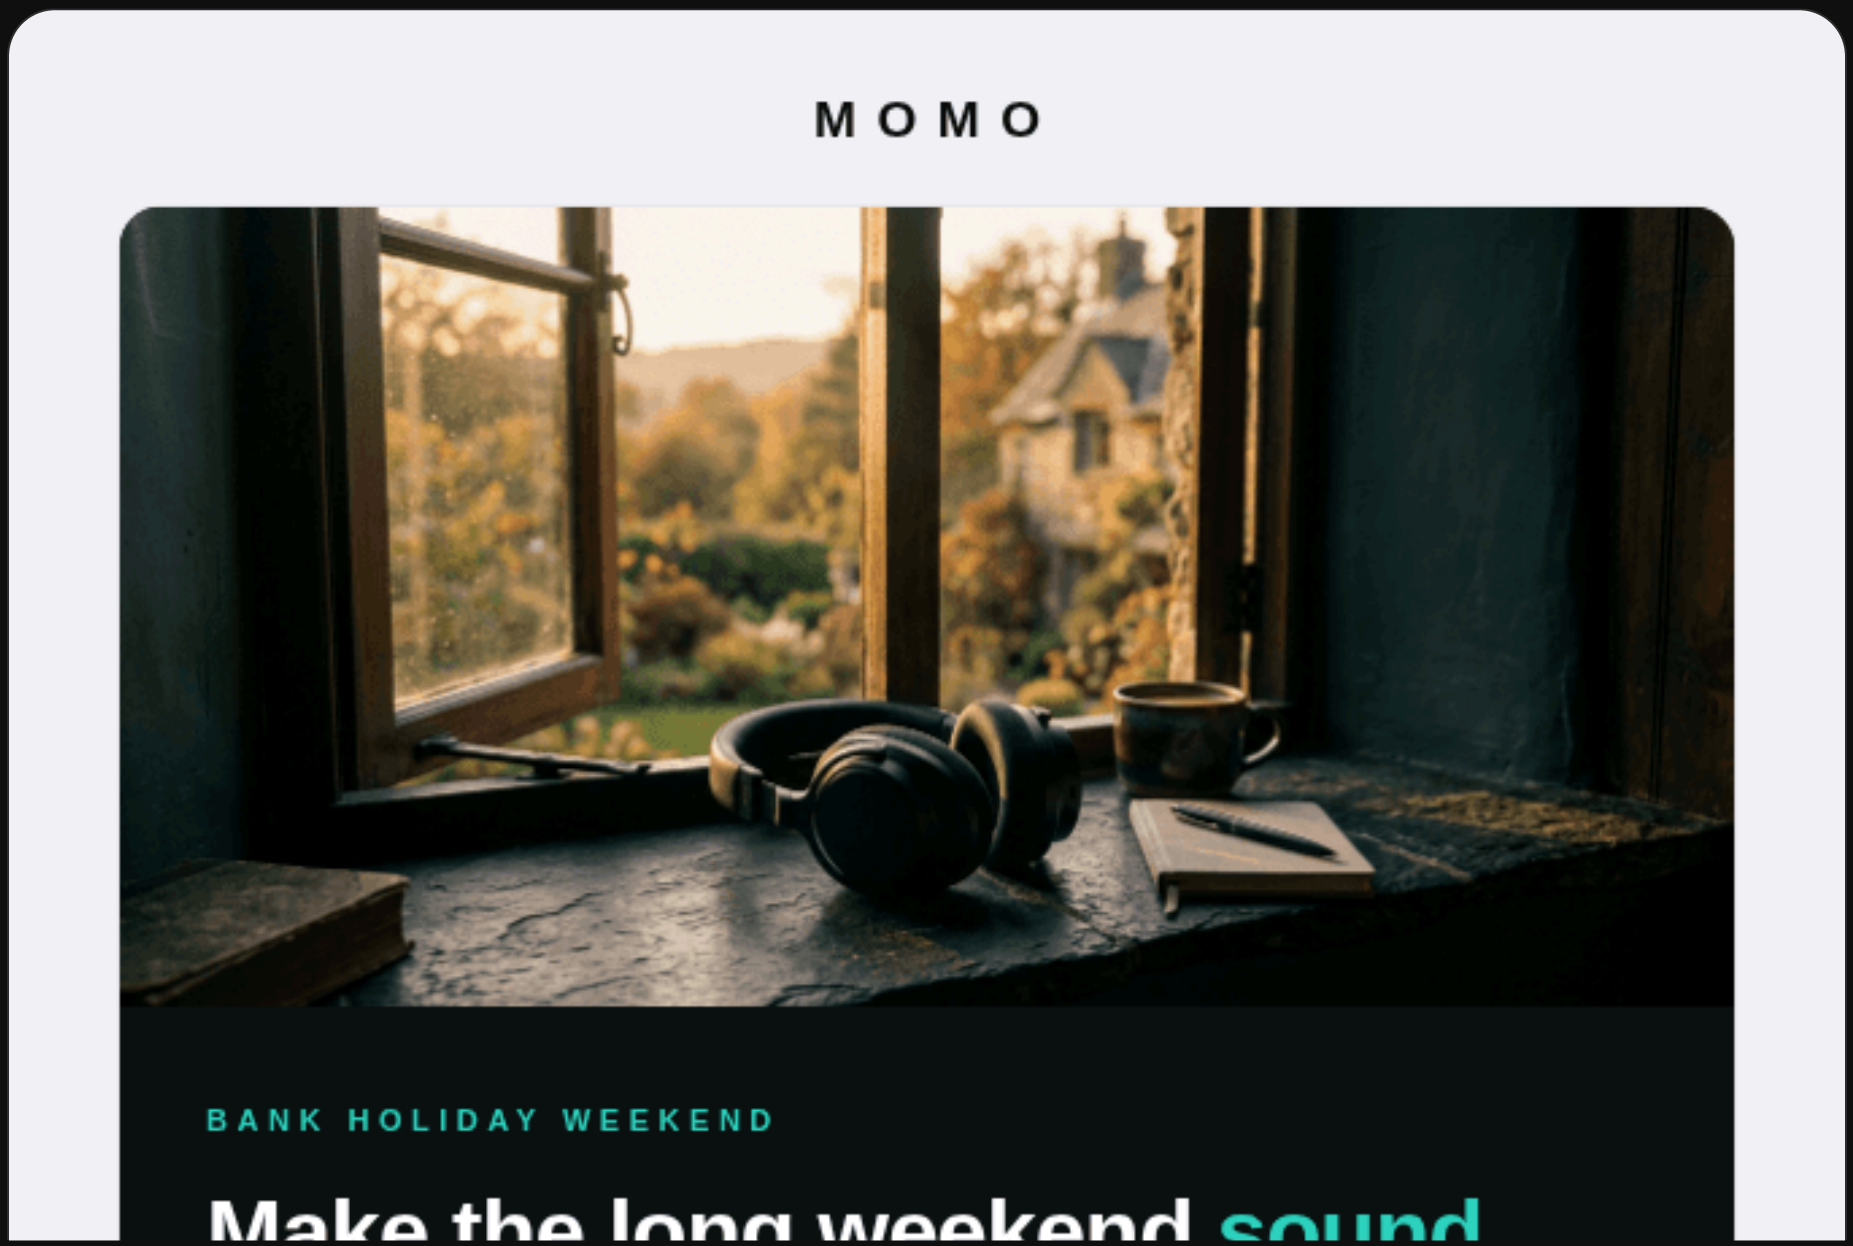

Black Friday, Bank Holiday and Christmas campaigns open as polished starters ready to edit.

BRAND CONTROL

Brand blocks that can't drift.

Headers and footers are saved, reused and locked. Only people the owner grants can unlock them, and every change is audited.

VERSION HISTORY

Every save is reversible.

The last 50 versions are kept, the original is always kept, and Reset to original makes mistakes cheap.

MOMO

ORDER CONFIRMED

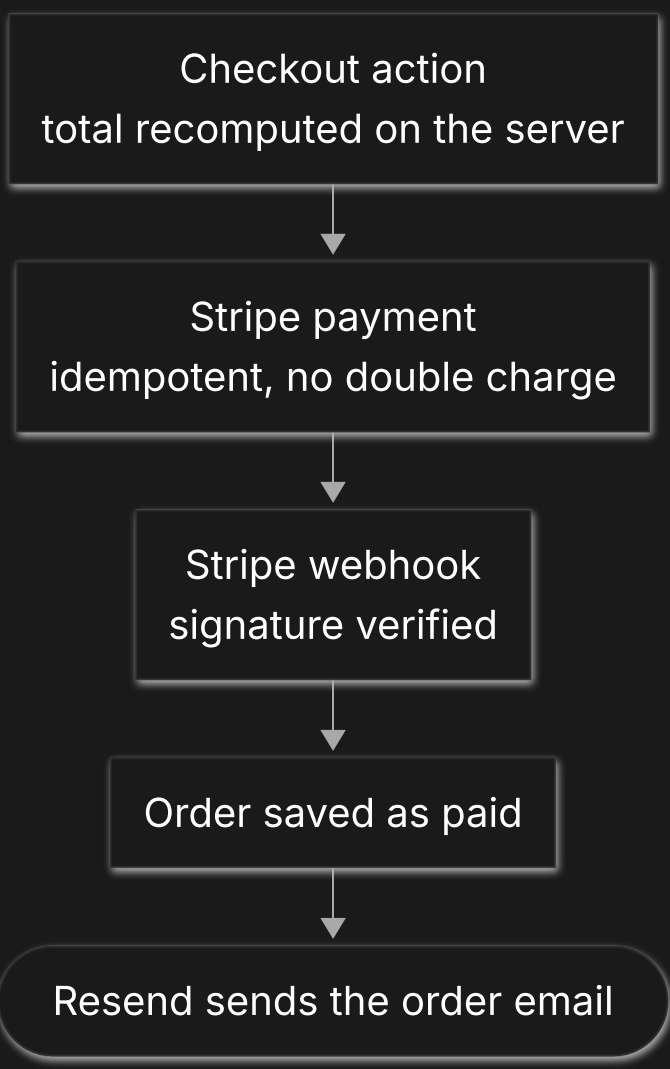

Thank you, Ada Lovelace

Order MOMO-1024 is confirmed and now being prepared with care.

CHECKOUT TO INBOX

From payment to order email, verified at every step.

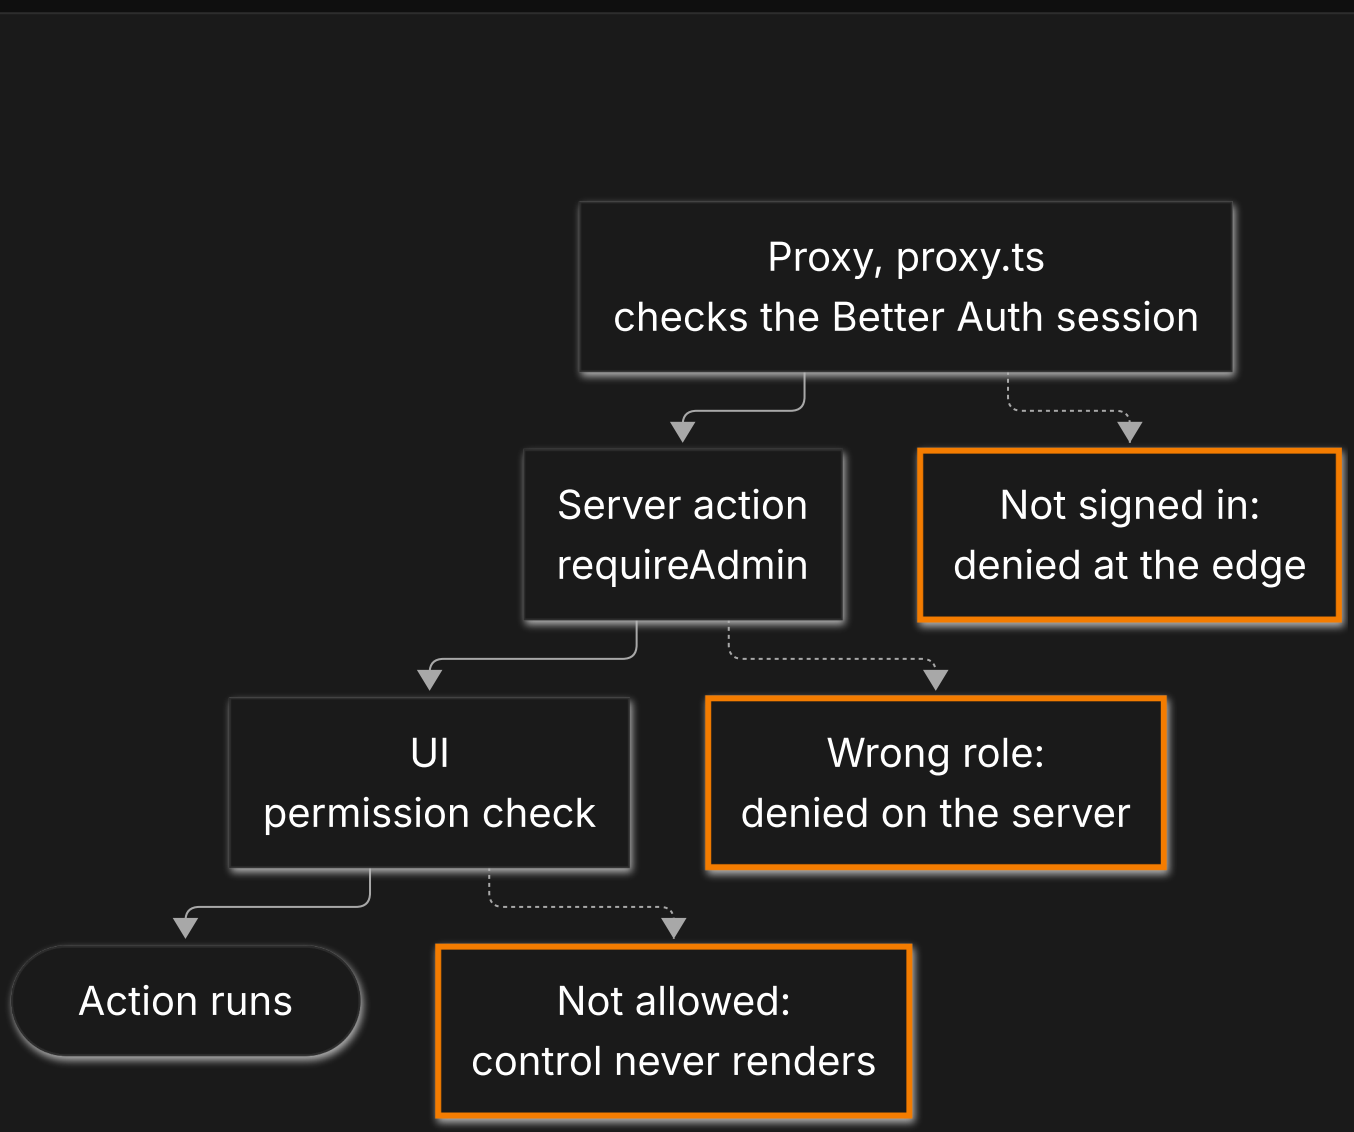

Stripe confirms the payment, a signed webhook saves the order, and Resend sends the email.

DEFENCE IN DEPTH

Permissions enforced in three layers.

One misconfigured layer is not a breach, because the other two still say no.

READ THE FULL STORY

Build vs buy, with the receipts.

Architecture, test growth, security posture and the business case are all in the public case study.
